

HTML ASSIGNMENT – 01

Topics: Introduction to HTML, History of HTML, Structure of HTML, Basic HTML Tags, Formatting Tags, Links

Part A – Theory Questions

- 1 What is HTML?
- 2 Why was HTML introduced?
- 3 What is the full form of HTML?
- 4 Who introduced HTML?
- 5 Write a short note on the history of HTML.
- 6 What is the purpose of `<!doctype html>` ?
- 7 Explain the basic structure of an HTML document.
- 8 What is the difference between `<head>` and `<body>` ?
9. What is an HTML tag?
- 10 What is the difference between opening and closing tags?

HTML
PART-A

1. what is HTML?
HTML stands for Hypertext Markup language. It is used to create and structure webpages.

2. why was HTML introduced?
HTML was introduced to create and share structured documents on the WWW.

3. HTML stands for Hypertext Markup Language.

4. who introduced HTML?
HTML was introduced by Tim Berners-Lee.

5. write a short note on the history of HTML.
HTML was created by Tim Berners-Lee in the early 1990s. It was developed to share and link documents on the WWW. HTML has evolved through several versions, with HTML5.

6. what is the purpose of `<!doctype html>`?
It tells the browsers that the doc is an HTML5 doc.

7. Explain the basic structure of an HTML doc.
The basic structure contains:
`<!doctype html>` → declares HTML5
`<html>` → Root element
`<head>` → contains page info & title
`<title>` → Define the browser tab title
`<body>` → contains the visible webpage content.

8. what is the diff b/w `<head>` & `<body>`?
`<head>` → contains info about the webpage
→ contains `<title>`, meta data, CSS links, etc.
→ usually not directly visible
`<body>` → contains visible webpage content
→ contains headings, paragraphs, image, links
→ visible in the browser

9. what is an HTML tag?
An HTML tag is a keyword enclosed in angle brackets `<>` used to define elements in an HTML doc.

10. what is the diff b/w opening and closing tags?
opening tag → `<html>`
closing tag → `</html>`
→ Starts an HTML element `<html>`
→ ends an HTML element `</html>`

PART-B → Basic HTML tags.

1. write the use of HTML tags.

→ `<html>` → Defines the root of an HTML doc
→ `<head>` → contains info about the webpage
→ `<title>` → Defines the webpage title
→ `<body>` → contains visible webpage content
→ `<h1>` - `<h6>` → Defines headings from largest to smallest
→ `<p>` → Defines a paragraph

 → Inserts a line break

<hr> → creates a horizontal line

part C → formatting tags

1. purpose of formatting tags.

→ - makes text bold

→ - Indicates imp text, normally displayed bold.

→ <i> - makes text italic

→ - normally displayed italic

→ <u> - underline

→ <mark> - highlights text

→ <small> - display smaller text

→ - shows deleted text with a strike through.

→ <sup> - Display superscript text

→ <sub> - Display subscript text.

part D - links

1. what is hyperlink?

A hyperlink is a clickable text or element that takes the user to another

webpage, website, file, or location

2. which HTML tag is used to create a link?

The `<a>` anchor tag is used to create a hyperlink.

ex:-

```
<a href = " " > </a>
```

3. what is the purpose of the href attribute?

The href attribute specifies the destination URL of a hyperlink.
